Artificial Intelligence & Data Science undergraduate with hands-on experience cleaning and analysing real-world data in Excel, Python and SQL — building formula-driven models, verifying results against source data, and turning messy datasets into clear, actionable reporting. Combines this technical grounding with two years of frontline operational experience in fast-paced, safety-critical environments, bringing reliability, attention to detail and sound judgement under pressure.

EDUCATION

BSc Artificial Intelligence & Data Science

Sept 2024 – Present

Manchester Metropolitan University — Expected First Class

Key Modules: Machine Learning, Data Structures & Algorithms, Data Processing, Software Engineering

PROJECTS

Personal Finance Data Cleaning & Analysis — Excel

- Cleaned and analysed 15,900 real transactions from a deliberately messy dataset using formulas only — zero manual data entry, fully traceable back to raw source
- Built format-agnostic date parsing, currency normalisation, and lookup-table-based correction for misspelled categories, payment methods and locations; flagged rather than silently discarded missing and placeholder-error data

Hummilashes.com — Freelance Full-Stack Client Website (JavaScript, CSS, Supabase, Stripe)

- Designed and built a full booking website end-to-end for an independent lash business, from a custom 3D logo through to a live production site
- Integrated Supabase for backend data and booking management, and Stripe for payment processing
- Built a custom admin dashboard giving the client direct visibility and control over her own bookings and business data

NEAT Autonomous Race Car Simulator — Python, NEAT

- Built an end-to-end pipeline converting real race track images into collision-aware simulation environments with ray-based distance sensors
- Evolved autonomous driving behaviour using the NEAT algorithm, optimising speed and time through a fitness-driven evolutionary pipeline

IMDB Sentiment Analysis — R, NLP

- Preprocessed 50,000 movie reviews, engineered TF-IDF/bigram features, and trained and benchmarked Logistic Regression, Naive Bayes and SVM models for sentiment classification

WORK EXPERIENCE

Construction Worker / Plant Machine Operator

Aug 2021 – Apr 2023

- Progressed from labourer to certified plant machine operator (dumper, roller, excavator) — entrusted with higher-value equipment through consistent reliability and safety performance
- Delivered work to strict deadlines across multiple UK sites (including Scotland and Wales), adapting quickly to new teams and site-specific safety requirements
- Maintained a strong safety record in a physically demanding, high-risk environment — developed the same discipline and attention to detail required when handling sensitive data, where a small oversight has real consequences
- Coordinated daily with site managers, contractors and fellow operators across changing sites, building the ability to communicate clearly and integrate into new teams quickly

Hospitality Team Member — Pitmaster / Dave's Hot Chicken/Afrikaana

- Sustained part-time work across fast-paced service environments throughout college and university, balancing employment with full-time study
- Developed strong customer communication and multitasking under sustained pressure during high-volume service periods
- Built time-management discipline maintaining consistent employment performance alongside academic commitments over several years

TRANSFERABLE SKILLS

Reliability & Safety-Consciousness · Working to Deadlines Under Pressure · Adaptability Across Teams & Environments · Client Communication · Attention to Detail
